

230 Kryostation

kryogenifex

The Kryogenifex 230 Kryostation is comprised of one MPVPTM, two booster tanks, and two 230 tanks. The two 230 tanks are connected to the MPVPTM via liquid hoses, for the transference of kryo, and vent hose, for the acceptance of pressure. The two Booster tanks are connected to the MPVPTM via booster hoses, for the transference of pressure to the Liquid nitrogen tanks through the MPVPTM. The 230 Tanks hold 230 Liters of Liquid nitrogen each for a larger amount of kryo for effects.

Features:

- 01 One MPVPTM
- 02 Two 230 Tanks
- 03 Two Booster tanks
- 04 Two Vent hoses
- 05 Two Booster hoses
- 06 Two liquid hoses
